

INDUSTRIAL ENERGY SOLUTIONS

RTP Controls' GridLogic System™ maximizes your energy incentives and contributes to your corporate social responsibility goals while giving you the freedom to focus on what is most important to you—running your business.

SAVINGS

Demand response initiatives and index price control strategies generate significant financial incentives and energy savings that go straight to your bottom line.

COMMUNITY

Your efforts to use less energy during critical times will improve the stability of your community's power supply and reduce the threat of rolling blackouts.

ENVIRONMENT

Demand response is a green initiative that helps preserve the environment by reducing dependence on "peaking" power plants that emit toxic pollutants.

GO GREEN

Participation in demand response and index price control programs are an important part of sustainability initiatives. Your targeted reductions in energy usage help reduce our dependence on “peaking” power plants that have the worst output of toxic pollutants. RTP will work with you to quantify how your energy initiatives contribute to your environmental and social responsibility goals.

Hands-off energy management strategies

RTP’s offering for industrial applications maximizes your demand response and index price control participation, producing significant incentives and adding to your corporate social responsibility initiatives.

Participation in RTP’s Negawatt Power Pool™ simplifies energy incentive programs to meet your goals, automates program participation according to your needs, and eliminates the burden of data management and reporting. The strength behind the Negawatt Power Pool™ is RTP Controls’ GridLogic System™, which interfaces with energy markets and demand response programs across North America to capture every energy incentive available to you.

Strength in automation

RTP’s GridLogic System™ and patented control algorithms are designed to leverage your existing infrastructure to enable hands-off participation in the incentive programs that compliment your operations. Our system automatically and intelligently notifies personnel, adjusts energy usage, and reports the benefits of participation—allowing you to focus on running your business.

Clear benefits

1. Financial Incentives:

As significant users of electricity, industrial facilities have a unique opportunity to contribute to grid reliability and capture significant incentives. RTP will work with you to choose the best incentive programs that maximize your financial benefit while protecting facility assets and minimizing or eliminating operational down-time.

2. Valuable information at your fingertips:

Through the GridLogic System™ web interface, you have access to real-time, high-resolution, aggregated power monitoring and financial reporting. This wealth of information is valuable for:

- Making energy procurement decisions
- Preemptively managing facility maintenance
- Improving general efficiency
- Quantifying how your initiatives impact the environment

3. Customized Solutions:

We understand that industrial processes can vary greatly from industry to industry, so our team will work with your facility personnel to develop a customized load reduction strategy that is realistic, effective, and sustainable. In addition, our automated solutions can manage your participation in energy incentive programs automatically, enabling you to capture financial benefits without increasing your work load.
